

Index

- acoustic beam focusing, 23, 25
- acoustic beam shifters, 21–24
- acoustic cloaks, 22, 23
- acoustic liner, 89
- acoustic metamaterials (AMMs), 208, 219
- active acoustic metamaterials (AAMMs), 19
- anisotropy factor, 200

- bandgaps (BGs), 207
- beam bender, 189

- change of variable, 177
- coincidence region, 128
- conformal space mapping, 196
- coordinate transformation, 175

- deformation of the physical quantity, 179

- effective medium method, 106
- effective medium theory, 315
- experimental performance characteristics, 43

- finite-element method, 212
- finite-element modeling, 149
- form-invariance, 179
- frequency response function (FRF), 153

- homogeneous transformation material, 195

- invisibility cloak, 190
- isotropic transformation material, 196

- lattice sum, 322, 327
- local affine transformation, 180
- local resonance (LR), 221

- membrane-type acoustic metamaterials (MAMs), 54
- multiple-scattering theory (MST), 316
- multistopband acoustic metamaterials, 141

- nonlinear acoustic metamaterials, 161

- pentamode (PM) materials, 184
- perfect absorbers, 21
- perfect lens, 192
- perfect reflectors, 21
- phononic bandgaps (PBGs), 208
- phononic crystals (PCs), 207
- photonic bandgaps (PtBGs), 207
- photonic crystals (PtCs), 207
- piezoelectric bimorph, 43, 44
- plane wave expansion (PWE), 208, 209
- programmable density and bulk modulus, 26

-
- reconfigurable metamaterial
platform, 22
 - scanning laser Doppler vibrometer
(SLDV), 224
 - scattering coefficient, 318
 - sound transmission loss (STL), 54,
106, 121, 226
 - spatial distortion, 174
 - surface acoustic waves
(SAWs), 215
 - transformation acoustics, 184
 - transformation elastodynamics,
185
 - transformation materials, 173
 - transformation method, 174, 189
 - transformation optics, 182
 - vibration absorber, 147
 - wide-stopband acoustic
metamaterials, 141

Dr. Perngjin Frank Pai received his BS in mechanical engineering from Tamkang University in 1979, his MS in mechanical engineering from National Taiwan University in 1984, and his PhD in engineering mechanics from Virginia Tech in 1990. Dr. Pai is C. W. LaPierre Professor of Mechanical and Aerospace Engineering at the University of Missouri and the director of the Structural Mechanics and Controls Lab. His research concentrates on modeling, analysis, testing, damage inspection, nonlinear dynamics and control of highly flexible deployable/inflatable structures, composites, smart structures, and metamaterials. Dr. Pai's research has been supported by 7 NSF grants, 5 DoD grants, 4 NASA grants, and 15 other grants. His publications include 100 referred journal papers, 130 conference papers, one graduate-level book entitled "Linear and Nonlinear Structural Mechanics" published with Dr. Ali H. Nayfeh by Wiley-Interscience in 2004, and another graduate-level book entitled "Highly Flexible Structures: Modeling, Computation and Experimentation" published by AIAA in 2007.

Dr. Guoliang Huang is a professor at the University of Missouri. He received PhD degree from University of Alberta, Canada, in 2004. After two years as postdoctoral/visiting assistant professor at the School of Aeronautics and Astronautics, Purdue University, he joined the University of Arkansas at Little Rock as an assistant professor in 2006 and associate professor in 2011. In 2014, he joined the Department of Mechanical & Aerospace Engineering, at the University of Missouri. Dr. Huang's current research interests include elastic/acoustic metamaterials, multi-scale modeling, structural health monitoring, structural dynamics, and micro and nano mechanics. He has published more than 60 journal papers in those fields.
