- zeta function, 20, 31

Larry C. Andrews is Professor Emeritus of Mathematics at the University of Central Florida and an associate member of the College of Optics/CREOL. He is also an associate member of the Florida Space Institute (FSI). Previously, he held a faculty position at Tri-State University and was a staff mathematician with the Magnavox Company, an antisubmarine warfare (ASW) operation. He received a doctoral degree in theoretical mechanics in 1970 from Michigan State University. Dr. Andrews has been an active researcher in optical wave propagation through random media for more than 30 years and is the author or co-author of twelve textbooks on topics of differential equations, boundary value problems, special functions, integral transforms, wave propagation through random media, and mathematical techniques for engineers. Along with wave propagation through random media, his research interests include special functions, random variables, atmospheric turbulence, and signal processing.
