Volume 11328

Proceedings of SPIE 0277-786X, V. 11328

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Design-Process-Technology Co-optimization for Manufacturability XIV, edited by Chi-Min Yuan, Ryoung-Han Kim,
Proc. of SPIE Vol. 11328, 1132801 · © 2020 SPIE · CCC code: 0277-786X/20/\$21 · doi: 10.1117/12.2570941

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at SPIDigitalLibrary.org.

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Paper Numbering: *Proceedings of SPIE* follow an e-First publication model. A unique citation identifier (CID) number is assigned to each article at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committee</i>

AI AND MACHINE LEARNING

11328 03	Machine Learning using retarget data to improve accuracy of fast lithographic hotspot detection [11328-2]
11328 05	Implementing Machine Learning OPC on product layouts [11328-4]
11328 06	Advanced memory cell design optimization with inverse lithography technology [11328-5]

ADVANCED DESIGNS

11328 07	Standard cell architectures for N2 node: transition from FinFET to nanosheet and to forksheet device [11328-6]
11328 08	Approaches for full coverage physical design space exploration and analysis by synthetic layout generation [11328-7]
11328 09	An automated system for checking process friendliness and routability of standard cells [11328-8]
11328 0A	Sequential 3D standard cell 4T architecture using design crenellation and self-aligned MOL for N2 technology and beyond [11328-9]

PATTERN MATCHING

11328 0C	DTCO acceleration to fight scaling stagnation (Invited Paper) [11328-11]
11328 0D	Dynamic pattern matching flow to enable low escape rate weak point detection [11328-12]
11328 0E	Integrating enhanced hotspot library into manufacturing OPC correction flow [11328-13]
11328 0F	Exploring patterning limit and enhancement techniques to improve printability of 2D shapes at 3nm node [11328-33]

DFM BY CHIP MAKERS

- 11328 0H **Foundry approach for layout risk assessment through comprehensive pattern harvesting and large-scale data analysis** [11328-15]
- 11328 0I **Process related yield risk mitigation with in-design pattern replacement for system ICs manufactured at advanced technology nodes** [11328-16]

DESIGN FOR MANUFACTURING

- 11328 0L **Systematic DTCO flow for yield improvement at 14/12nm technology node** [11328-19]
- 11328 0M **Co-optimizing DFM enhancements and their impact on layout-induced circuit performance for analog designs** [11328-20]
- 11328 0N **Enabling nanoimprint simulator for quality verification; process-design co-optimization toward high volume manufacturing** [11328-21]
- 11328 0O **Process variation-aware mask optimization with iterative improvement by subgradient method and boundary flipping** [11328-22]

DEVICE AND INTEGRATION

- 11328 0Q **Efficient design of guard rings and antenna diodes to improve manufacturability of FDSOI circuits** [11328-24]
- 11328 0R **Cost-performance optimization of fine-pitch W2W bonding: functional system partitioning with heterogeneous FEOL/BEOL configurations** [11328-25]
- 11328 0S **How utilizing curvilinear design enables better manufacturing process window** [11328-26]

DPTCO FROM EQUIPMENT VENDORS

- 11328 0V **Holistic method for reducing overlay error at the 5nm node and beyond (Invited Paper)** [11328-29]

DPTCO FROM EDA VENDORS

- 11328 0W **New approaches to physical verification closure and cloud computing come to the rescue in the EUV era (Invited Paper)** [11328-30]

11328 0Y **Multi-varied implementations with common underpinnings in design technology co-optimization (Invited Paper)** [11328-32]

POSTER SESSION

11328 0Z **An advanced and efficient methodology for process setup and monitoring by using process stability diagnosis in computational lithography** [11328-34]

11328 10 **Via optimization methodology for enhancing robustness of design at 14/12nm technology node** [11328-35]

11328 12 **Explore process weak patterns for manufacturing friendly design** [11328-39]

11328 14 **VIA design optimization for fast yield ramping in advanced nodes** [11328-41]

11328 16 **Early detection of Cu pooling with advanced CMP modeling** [11328-43]

11328 17 **CMP simulation-based dummy fill optimization** [11328-44]

11328 18 **An efficient way to accelerate litho hotspot checking** [11328-45]

11328 19 **Kissing corner handling in advanced nodes** [11328-46]

11328 1A **DFM: "Design for Manufacturing" or "Design Friendly Manufacturing" How to convert extra EPE budget into design freedom by SMO** [11328-47]

11328 1B **Fast OPC repair flow based on machine learning** [11328-48]

11328 1C **A comprehensive standard cell library qualification to prevent lithographic challenges** [11328-49]

11328 1D **Implementing Machine Learning for OPC retargeting** [11328-50]

11328 1E **A feature selection method for weak classifier based hotspot detection** [11328-51]

11328 1G **Unsupervised machine learning based CD-SEM image segregator for OPC and process window estimation** [11328-53]

Authors

Numbers in the index correspond to the last two digits of the seven-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first five digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.
