SPIE

*Cosponsored by*  
Philips Healthcare (United States)

*Cooperating Organizations*  
American Association of Physicists in Medicine (United States)  
Radiological Society of North America (United States)  
World Molecular Imaging Society (United States)  
Society for Imaging Informatics in Medicine (United States)  
International Foundation for Computer Assisted Radiology and Surgery (United States)  
Medical Image Perception Society (United States)

*Published by*  
SPIE

**Volume 12464**

Proceedings of SPIE, 1605-7422, V. 12031

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Medical Imaging 2023: Image Processing, edited by Olivier Colliot, Ivana Išgum,  
Proc. of SPIE Vol. 12464, 1246401 · © 2023 SPIE  
1605-7422 · doi: 10.1117/12.2681692

Proc. of SPIE Vol. 12464 1246401-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:

Author(s), "Title of Paper," in *Medical Imaging 2023: Image Processing*, edited by Olivier Colliot, Ivana Išgum, Proc. of SPIE 12464, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

# Contents

xii *Conference Committee*

---

## REGISTRATION AND DEFORMABLE GEOMETRY

---

- 12464 02 **Anatomy-specific acquisition-agnostic affine registration learned from fictitious images**  
[12464-1]
- 12464 03 **Patch-RegNet: a hierarchical deformable registration framework for inter-/intra-modality head-and-neck image registration with ViT-Morph** [12464-2]
- 12464 04 **A multiscale algorithm for computing realistic image transformations: application to the modelling of fetal brain growth** [12464-3]
- 12464 05 **Shape analysis of amygdala atrophy using SPHARM-OT** [12464-124]

---

## CLASSIFICATION AND SEGMENTATION

---

- 12464 06 **An auxiliary attention-based network for joint classification and localization of breast tumor on ultrasound images** [12464-5]
- 12464 07 **Stratification of lung cancer risk with thoracic imaging phenotypes** [12464-6]
- 12464 08 **Analyzing components of a transformer under different dataset scales in 3D prostate CT segmentation** [12464-53]
- 12464 09 **Estimation of the ankle-joint space visibility in x-ray images using convolutional neural networks** [12464-8]
- 12464 0A **Weakly supervised airway orifice segmentation in video bronchoscopy** [12464-9]

---

## CARDIOVASCULAR APPLICATIONS

---

- 12464 0B **Combining arterial and venous CT scans in a multi-encoder network for improved hepatic vessel segmentation** [12464-10]
- 12464 0C **Automated coronary artery calcium segmentation in cardiac CT using combined probability map and feature analysis: a preliminary report** [12464-11]
- 12464 0D **Comparative analysis between convolutional long short-term memory networks and vision transformers for coronary calcium scoring in non-contrast CT** [12464-12]

- 12464 OE **Semi-supervised vessel wall detection and segmentation from 3D femoral MR images** [12464-14]
- 12464 OF **Transferring deep convolutional network representations from SPECT to improve PET cardiac outcome prediction** [12464-15]

---

#### IMAGE SYNTHESIS AND GENERATIVE MODELS

---

- 12464 OH **Batch size go big or go home: counterintuitive improvement in medical autoencoders with smaller batch size** [12464-17]
- 12464 OI **A deep generative prior for high-resolution isotropic MR head slices** [12464-18]
- 12464 OJ **3D-2D GAN based brain metastasis synthesis with configurable parameters for fully 3D data augmentation** [12464-19]

---

#### BRAIN APPLICATIONS

---

- 12464 OP **FastCod: fast brain connectivity in diffusion imaging** [12464-20]
- 12464 OQ **SSL<sup>2</sup>: self-supervised learning meets semi-supervised learning: multiple sclerosis segmentation in 7T-MRI from large-scale 3T-MRI** [12464-21]
- 12464 OR **Interpretable automatic detection of incomplete hippocampal inversions using anatomical criteria** [12464-22]
- 12464 OS **An attentional unet with an auxiliary class learning to support acute ischemic stroke segmentation on CT** [12464-23]
- 12464 OT **Automatic brain pose estimation in fetal MRI** [12464-24]
- 12464 OU **Automatic preprocessing pipeline for white matter functional analyses of large-scale databases** [12464-25]

---

#### IMAGE QUALITY, HARMONIZATION, AND QUANTITATIVE ANALYSIS

---

- 12464 OV **Scalable NMF via linearly optimized data compression** [12464-26]
- 12464 OW **Deep constrained spherical deconvolution for robust harmonization** [12464-27]
- 12464 OX **Harmonization of repetition time and scanner effects on estimates of brain hemodynamic response function** [12464-28]

12464 0Y **Novel application of the attention mechanism on medical image harmonization** [12464-29]

---

**DEEP-DIVE SESSION**

---

12464 0Z **Domain generalization for robust MS lesion segmentation** [12464-30]

12464 10 **Synthesizing audio from tongue motion during speech using tagged MRI via transformer** [12464-31]

12464 11 **Learning disentangled representations for explainable chest x-ray classification using Dirichlet VAEs** [12464-32]

---

**TRANSFORMERS**

---

12464 12 **Time-distance vision transformers in lung cancer diagnosis from longitudinal computed tomography** [12464-33]

12464 13 **Direct head-to-head comparison of convolutional long short-term memory and transformer networks for artificial intelligence-based quantification of atherosclerotic plaque and stenosis from coronary CT angiography** [12464-34]

12464 14 **Uncertainty-aware transformer model for anatomical landmark detection in paraspinal muscle MRIs (Image Processing Best Student Paper Award)** [12464-35]

12464 15 **L-former: a lightweight transformer for realistic medical image generation and its application to super-resolution** [12464-36]

12464 16 **Convolutions, transformers, and their ensembles for the segmentation of organs at risk in radiation treatment of cervical cancer** [12464-37]

---

**IMAGE RECONSTRUCTION, CORRECTION, AND QUALITY**

---

12464 17 **SynBOLD-DisCo: synthetic BOLD images for distortion correction of fMRI without additional calibration scans** [12464-38]

12464 18 **A latent space for unsupervised MR image quality control via artifact assessment** [12464-39]

12464 19 **Supervised transform learning for limited angle tomographic reconstruction** [12464-40]

12464 1A **DrDisco: Deep Registration for Distortion Correction of diffusion MRI with single phase-encoding** [12464-41]

---

## SEGMENTATION

---

- 12464 1B **Co-Unet-GAN: a co-learning domain adaptation model on echocardiography segmentation** [12464-42]
- 12464 1C **Peripapillary atrophy segmentation in fundus images via multi-task learning** [12464-43]
- 12464 1D **Cascaded neural network segmentation pipeline for automated delineation of prostate and organs at risk in male pelvic CT** [12464-45]
- 12464 1E **Estimation of incomplete organ-coverage using 3D fully convolutional networks** [12464-46]

---

## POSTER SESSION

---

- 12464 1F **Detecting human gastric peristalsis using magnetically controlled capsule endoscope via deep learning** [12464-47]
- 12464 1G **Unsupervised quality assurance for brain MR image rigid registration using latent shape representation** [12464-48]
- 12464 1H **Transfer learning from synthetic to routine clinical data for motion artefact detection in brain T1-weighted MRI** [12464-49]
- 12464 1I **An extensive pixel-level augmentation framework for unsupervised cross-modality domain adaptation** [12464-52]
- 12464 1J **Introducing soft topology constraints in deep learning-based segmentation using projected pooling loss** [12464-54]
- 12464 1L **Adjoint operators enable fast and amortized machine learning based Bayesian uncertainty quantification** [12464-56]
- 12464 1M **Implementation of deep learning algorithms for automatic MRI segmentation and fat fraction quantification in individual muscles** [12464-57]
- 12464 1N **Integrative risk predictors of temporomandibular joint osteoarthritis progression** [12464-58]
- 12464 1O **A study of attention information from transformer layers in hybrid medical image segmentation networks** [12464-59]
- 12464 1P **Stable classification of diabetic structures from incorrectly labeled OCTA en face images using multi instance learning** [12464-60]
- 12464 1Q **A slice classification neural network for automated classification of axial PET/CT slices from a multi-centric lymphoma dataset** [12464-61]
- 12464 1S **A relative motion model for myocardial infarction detection** [12464-65]

- 12464 1T **Image registration of diffusion weighted and conventional breast MRI** [12464-66]
- 12464 1U **Towards lifting the trade-off between accuracy and adversarial robustness of deep neural networks with application on COVID 19 CT image classification and medical image segmentation** [12464-67]
- 12464 1V **Self-supervised denoising using optimized blind-spot networks for real-time application in 4D-OCT** [12464-70]
- 12464 1W **A deep learning method for pinwheel artifact reduction in CT** [12464-71]
- 12464 1X **Real-time mitral annulus segmentation from 4D transesophageal echocardiography using deep learning regression** [12464-72]
- 12464 1Y **Multi-step reinforcement learning for medical image super-resolution** [12464-73]
- 12464 1Z **Characterizing visual cortical magnification with topological smoothing and optimal transportation** [12464-74]
- 12464 20 **Topography-based feature extraction of the human placenta from prenatal MR images** [12464-75]
- 12464 22 **Unsupervised registration refinement for generating unbiased eye atlas** [12464-77]
- 12464 23 **Longitudinal variability analysis on low-dose abdominal CT with deep learning-based segmentation** [12464-79]
- 12464 24 **How can data augmentation improve attribution maps for disease subtype explainability** [12464-81]
- 12464 25 **Ultrasound shear wave velocity estimation in a small field of view via spatio-temporal deep learning** [12464-83]
- 12464 26 **Highly accurate deep registration networks for large deformation estimation in compression ultrasound** [12464-85]
- 12464 27 **Mapping the impact of approximate gradient nonlinearity fields correction on tractography** [12464-86]
- 12464 28 **Simulation based evaluation framework for deep learning unsupervised anomaly detection on brain FDG-PET** [12464-87]
- 12464 29 **New starting point registration method for tagged MRI tongue motion estimation** [12464-88]
- 12464 2B **Comparing voxel- and feature-wise harmonization of complex graph measures from multiple sites for structural brain network investigation of aging** [12464-90]
- 12464 2C **3D body shape for regional and appendicular body composition estimation** [12464-92]

- 12464 2D **Deep learning-based multi-organ CT segmentation with adversarial data augmentation** [12464-93]
- 12464 2E **Impact of train- and test-time Hounsfield unit window variation on CT segmentation of liver lesions** [12464-94]
- 12464 2F **Joint synthesis of WMn MPRAGE and parameter maps using deep learning and an imaging equation** [12464-95]
- 12464 2G **Investigation of probability maps in deep-learning-based brain ventricle parcellation** [12464-96]
- 12464 2H **Morphological analysis of ankle shorts bones of children with cerebral palsy: a comparative study** [12464-97]
- 12464 2I **The topology-overlap trade-off in retinal arteriole-venule segmentation** [12464-98]
- 12464 2J **Using a GAN for CT contrast enhancement to improve CNN kidney segmentation accuracy** [12464-99]
- 12464 2K **Feasibility of simulated realistic textured XCAT phantoms for assessment of radiomic feature stability** [12464-100]
- 12464 2L **Deep learning-based image registration method: with application to Scanning Laser Ophthalmoscopy (SLO) longitudinal images** [12464-102]
- 12464 2M **Quantifying velopharyngeal motion variation in speech sound production using an audio-informed dynamic MRI atlas** [12464-103]
- 12464 2N **Octree cube constraints in PBD method for high resolution surgical simulation** [12464-104]
- 12464 2O **Deep whole brain segmentation of 7T structural MRI** [12464-105]
- 12464 2P **Measurement of the amount of chromosome aberration through object detection** [12464-106]
- 12464 2Q **Semi-supervised clustering for neuro-subtyping of autism spectrum disorder** [12464-107]
- 12464 2R **Segmentation and identification of fatty infiltration of the erector spinae using deep learning** [12464-108]
- 12464 2S **How to overcome the data limited segmentation in abdominal CT: multi-planar UNet coupled with augmented contrast-boosting** [12464-109]
- 12464 2T **Simultaneous wavefront and 3D tomographic reconstructions for phase imaging using Hartmann sensor** [12464-111]
- 12464 2U **Deep angiogram: trivializing retinal vessel segmentation** [12464-112]
- 12464 2V **Deformable registration of 3D CT images with partial liver** [12464-113]

- 12464 2W **Prediction of postoperative 3D spine shape using Controlled Point Deformation Network (CPDNet)** [12464-114]
- 12464 2X **Can a single image processing algorithm work equally well across all phases of DCE-MRI** [12464-115]
- 12464 2Y **Self-supervised learning enhanced ultrasound video thyroid nodule tracking** [12464-117]
- 12464 30 **Exploring timing patterns around the phase transition of the brain system using resting-state fMRI** [12464-120]
- 12464 31 **Skeletal modeling of the tricuspid valve via cylindrical parameterization** [12464-121]
- 12464 32 **Synthesis of pediatric brain tumor images with mass effect** [12464-122]
- 12464 33 **Distance map supervised landmark localization for MR-TRUS registration (Cum Laude Poster Award)** [12464-123]
- 12464 34 **Segmenting thalamic nuclei from manifold projections of multi-contrast MRI** [12464-125]
- 12464 36 **Volumetric measurements of brain in multiple sclerosis: comparison of segmentation methods in simulated MRI data** [12464-127]
- 12464 37 **Investigating the impact of class-dependent label noise in medical image classification** [12464-128]
- 12464 38 **Interstitial lung disease detection in CT using an ensemble method of patch CNN and radiomic classifier** [12464-129]
- 12464 39 **GAN based ROI conditioned synthesis of medical image for data augmentation** [12464-130]
- 12464 3A **Dmriprep: open-source diffusion MRI quality control framework with graphical user interface** [12464-131]
- 12464 3B **Attention-based 3D convolutional networks for detection of geographic atrophy from optical coherence tomography scans** [12464-132]
- 12464 3C **Revisiting the supervision level in semi-supervised learning for automated tumor segmentation: application to lymphoma FDG PET imaging** [12464-133]
- 12464 3D **Semantic segmentation of individual muscle groups in 3D thigh MRI** [12464-134]
- 12464 3E **State-of-the-art object detection algorithms for small lesion detection in PSMA PET: use of rotational maximum intensity projection (MIP) images** [12464-135]
- 12464 3F **Pseudo-contrast cardiac CT angiography derived from non-contrast CT using conditional generative adversarial networks** [12464-136]
- 12464 3G **Priority attention network with Bayesian learning for fully automatic segmentation of substantia nigra from neuromelanin MRI** [12464-137]

12464 3H **Resolving impact of technical and biological variability on the convolutional neural networks: evaluating chest x-ray scans** [12464-138]

---

**DIGITAL POSTER SESSION**

---

- 12464 3I **Deep curriculum learning for follow-up MRI registration in glioblastoma** [12464-4]
- 12464 3J **Lifelong learning with dynamic convolutions for glioma segmentation from multi-modal MRI** [12464-7]
- 12464 3K **Fully-automatic aortic valve landmarks detection with two-stage-based convolutional neural networks** [12464-13]
- 12464 3L **Multi-modality network based on CGAN and attention mechanism for glaucoma grading** [12464-16]
- 12464 3M **A two-stage unsupervised domain adaptation method for OCT image segmentation** [12464-50]
- 12464 3N **Pancreatic CT image segmentation based on transfer learning** [12464-51]
- 12464 3O **An FPGA-based edge computing and accelerating platform for fast diabetic retinopathy diagnosis** [12464-62]
- 12464 3P **Multi-source bioluminescence tomography reconstruction approach base on subspace decision** [12464-64]
- 12464 3Q **Cardiac dynamics compensation for intravascular ultrasound sequences** [12464-68]
- 12464 3R **Meta-learning-based retinal pathology classification from optical coherence tomography images** [12464-69]
- 12464 3S **Multi-target reconstruction of fluorescence molecular tomography based on blind source separation** [12464-78]
- 12464 3T **A comparison of U-Net series for CT pancreas segmentation** [12464-82]
- 12464 3U **Segmentation of common lesions in age-related macular degeneration based on boundary attention mechanism** [12464-84]
- 12464 3V **Learning to atlas register for rapid segmentation of brain structures in fetal MRI** [12464-91]
- 12464 3W **Based on model-driven fast iterative shrinkage thresholding network for bioluminescence tomography reconstruction** [12464-101]
- 12464 3X **IF-Net: information fusion network for meibomian gland area and atrophy area segmentation** [12464-110]

- 12464 3Y **Pulmonary CT nodules segmentation using an enhanced square U-Net with depthwise separable convolution** [12464-116]
- 12464 3Z **Single-view cone beam CT reconstruction with Swin transformer based deep learning** [12464-119]

# Conference Committee

## *Symposium Chairs*

**Robert M. Nishikawa**, University of Pittsburgh (United States)  
**Despina Kontos**, Penn Medicine (United States)

## *Conference Chairs*

**Olivier Colliot**, Center National de la Recherche Scientifique (France)  
**Ivana Išgum**, Amsterdam UMC (Netherlands)

## *Conference Program Committee*

**Elsa D. Angelini**, Imperial College London (United Kingdom) and  
Columbia University (United States) and Télécom ParisTech  
(France)  
**Meritxell Bach-Cuadra**, Université de Lausanne (Switzerland)  
**Ulas Bagci**, Northwestern University (United States)  
**Niha G. Beig**, Tempus Laboratories Inc. (United States)  
**Katharina Breininger**, Friedrich-Alexander-Univ. Erlangen-Nürnberg  
(Germany)  
**Esther E. Bron**, Erasmus MC (Netherlands)  
**Ninon Burgos**, Institut du Cerveau et de la Moelle Épinière (France)  
**Antong Chen**, Merck & Co., Inc. (United States)  
**Tolga Çukur**, Bilkent Üniversitesi (Turkey)  
**Benoit M. Dawant**, Vanderbilt University (United States)  
**Marleen de Bruijne**, Erasmus MC (Netherlands)  
**Damini Dey**, Cedars-Sinai Medical Center (United States)  
**Lotta Maria Ellingsen**, University of Iceland (Iceland)  
**Alexandre X. Falcão**, Universidade Estadual de Campinas (Brazil)  
**Aaron Fenster**, Robarts Research Institute (Canada)  
**James Fishbaugh**, NYU Tandon School of Engineering (United States)  
**Alejandro F. Frangi**, University of Leeds (United Kingdom)  
**Yu Gan**, The University of Alabama (United States)  
**Mona K. Garvin**, The University of Iowa (United States)  
**James C. Gee**, University of Pennsylvania (United States)  
**Miguel Angel González Ballester**, Universitat Pompeu Fabra (Spain)  
**Hayit Greenspan**, Tel Aviv University (Israel)  
**David R. Haynor**, University of Washington (United States)  
**Tobias Heimann**, Siemens Healthineers (Germany)  
**Bulat Ibragimov**, University of Copenhagen (Denmark)  
**Leigh Johnston**, The University of Melbourne (Australia)

**Jayashree Kalpathy-Cramer**, Athinoula A. Martinos Center for Biomedical Imaging (United States) and Harvard University (United States)

**Stefan Klein**, Erasmus MC (Netherlands)

**Susana K. Lai-Yuen**, University of South Florida (United States)

**Bennett A. Landman**, Vanderbilt University (United States)

**Carole Lartizen**, CREATIS (France)

**Tianhu Lei**, University of Pittsburgh (United States)

**Tim Leiner**, University Medical Center Utrecht (Netherlands)

**Karim Lekadir**, Universitat de Barcelona (Spain)

**Boudewijn P. F. Lelieveldt**, Leiden University Medical Center (Netherlands)

**Natasha Lepore**, Children's Hospital Los Angeles (United States) and The University of Southern California (United States)

**Murray H. Loew**, The George Washington University (United States)

**Cristian Lorenz**, Philips Research (Germany)

**Frederik Maes**, KU Leuven (Belgium)

**Ana Maria Marques da Silva**, PUCRS-IPCT (Brazil)

**Diana Mateus**, Ecole Centrale de Nantes (France)

**Jhimli Mitra**, GE Research (United States)

**Marc Modat**, King's College London (United Kingdom)

**Albert Montillo**, The University of Texas Southwestern Medical Center at Dallas (United States)

**Kensaku Mori**, Nagoya University (Japan)

**Mads Nielsen**, University of Copenhagen (Denmark)

**Ipek Oguz**, Vanderbilt University (United States)

**Tingying Peng**, Helmholtz Zentrum München GmbH (Germany)

**Dzung L. Pham**, Henry M. Jackson Foundation (United States) and National Institutes of Health (United States) and Johns Hopkins University (United States)

**Juan Carlos Prieto**, The University of North Carolina at Chapel Hill (United States)

**Jerry L. Prince**, Johns Hopkins University (United States)

**Xin Qi**, Rutgers, The State University of New Jersey (United States)

**Nishant Ravikumar**, University of Leeds (United Kingdom)

**Maryam E. Rettmann**, Mayo Clinic (United States)

**Letícia Rittner**, Universidade Estadual de Campinas (Brazil)

**Mirabela Rusu**, Stanford University School of Medicine (United States)

**Punam K. Saha**, The University of Iowa (United States)

**Rachel E. Sparks**, King's College London (United Kingdom)

**Marius Staring**, Leiden University Medical Center (Netherlands)

**Joshua Victor Stough**, Bucknell University (United States)

**Martin A. Styner**, The University of North Carolina at Chapel Hill (United States)

**Kenji Suzuki**, Tokyo Institute of Technology (Japan)

**Tanveer F. Syeda-Mahmood**, IBM Research - Almaden (United States)

**Zeike A. Taylor**, University of Leeds (United Kingdom)

**Yubing Tong**, University of Pennsylvania (United States)  
**Jayaram K. Udupa**, University of Pennsylvania (United States)  
**Koen Van Leemput**, Harvard Medical School (United States) and  
Massachusetts General Hospital (United States)  
**Tomaz Vrtovec**, University of Ljubljana (Slovenia)  
**Wolfgang Wein**, ImFusion GmbH (Germany)  
**Guang Yang**, National Heart and Lung Institute (United Kingdom)  
**Jonghye Woo**, Massachusetts General Hospital (United States)  
**Maria A. Zuluaga**, EURECOM (France)
