Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID Number.

Introduction

The SPIE 2013 Nano-Bio Sensing, Imaging, and Spectroscopy (hereby NBSIS) was hosted by The Korean Sensors Society, The Optical Society of Korea, and co-sponsored by SPIE. More than 130 current issues such as nano-bio based sensing, imaging, research trends, and future prospects in the field of spectrum technology were presented at this conference. In addition, various invited talks by celebrated scientists from all over the world were prepared including special colloquia about Alzheimer's disease. We wish to thank every participant who presented high quality research results. Here are 36 proceedings selected for publication after peer-review. This conference will be hosted every other year starting in Korea from 2013. Your continued interest and concern will be greatly appreciated.
