Volume 9485

Proceedings of SPIE 0277-786X, V. 9485

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

Thermosense: Thermal Infrared Applications XXXVII, edited by Sheng-Jen (Tony) Hsieh, Joseph N. Zalameda,
Proc. of SPIE Vol. 9485, 948501 · © 2015 SPIE · CCC code: 0277-786X/15/\$18 · doi: 10.1117/12.2199297

Proc. of SPIE Vol. 9485 948501-1

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Other copying for republication, resale, advertising or promotion, or any form of systematic or multiple reproduction of any material in this book is prohibited except with permission in writing from the publisher. The CCC fee code is 0277-786X/15/\$18.00.

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print. Papers are published as they are submitted and meet publication criteria. A unique citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID Number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages.

Contents

vii	<i>Authors</i>
ix	<i>Conference Committees</i>
xiii	<i>Introduction</i>

SESSION 1 AEROSPACE APPLICATIONS

9485 02	Real time fatigue damage growth assessment of a composite three-stringer panel using passive thermography (Invited Paper) [9485-1]
9485 03	Nondestructive evaluation of aircraft coatings with infrared diffuse reflectance spectra [9485-2]
9485 04	Comparative evaluation of aerospace composites using thermography and ultrasonic NDT techniques [9485-3]
9485 05	A new approach on JPSS VIIRS BCS and SVS PRT calibration [9485-4]
9485 06	Integration of infrared and optical imaging techniques for the nondestructive inspection of aeronautic parts [9485-6]

SESSION 2 BUILDING MATERIALS AND INFRASTRUCTURE APPLICATIONS I

9485 07	Practical identification of moisture sources in building assemblies using infrared thermography [9485-7]
9485 08	Evaluation of angle dependence in spectral emissivity of ceramic tiles measured by FT-IR [9485-8]
9485 09	Study of experimental parameters for IRT applications in building elements using multi-layered analytical solutions [9485-9]
9485 0A	Active infrared thermographic testing with distance heating [9485-10]

SESSION 3 BUILDING MATERIALS AND INFRASTRUCTURE APPLICATIONS II

9485 0B	Comparison of lock-in and pulse-phase thermography for defect characterization in FRP composites applied to concrete [9485-11]
9485 0C	Crack depth determination with inductive thermography [9485-12]

- 9485 OD **Measurement of flaw size from thermographic data** [9485-13]
- 9485 OH **Temperature measurements on solid surfaces in rack-storage fires using IR thermography** [9485-19]
- 9485 OI **Comparison of step heating and modulated frequency thermography for detecting bubble defects in colored acrylic glass** [9485-16]
- 9485 OJ **Detection of pinhole defects in optical film using thermography and artificial neural network** [9485-17]

SESSION 4 DETECTOR AND SENSORY SYSTEM DEVELOPMENT

- 9485 OK **Advances in infrared fibers (Invited Paper)** [9485-20]
- 9485 OL **Logarithmic InGaAs detectors with global shutter and active dark current reduction** [9485-21]
- 9485 OM **The fabrication of sub-micron size cesium iodide x-ray scintillator** [9485-22]
- 9485 ON **Swap intensified WDR CMOS module for I²/LWIR fusion** [9485-23]
- 9485 OO **Highly sensitive arrayed indium-antimony nanowires for infrared detection** [9485-24]
- 9485 OP **Computational methods for improving thermal imaging for consumer devices** [9485-25]

SESSION 5 NDT AND SIGNAL PROCESSING

- 9485 OQ **Pulsed thermal NDT in tables, figures, and formulas (Invited Paper)** [9485-26]
- 9485 OR **Advances in thermographic signal reconstruction (Invited Paper)** [9485-27]
- 9485 OS **Principal component analysis of thermographic data (Invited Paper)** [9485-28]
- 9485 OT **Review of pulsed phase thermography (Invited Paper)** [9485-29]
- 9485 OV **A novel data processing algorithm in thermal property measurement and defect detection by using one-sided active infrared thermography** [9485-31]

SESSION 6 NDT AND MATERIALS EVALUATION I

- 9485 OX **Infrared thermography and ultrasound C-scan for non-destructive evaluation of 3D carbon fiber materials: a comparative study (Best Student Paper Award)** [9485-33]
- 9485 OY **Characterization of phononic heterostructures by infrared thermography** [9485-34]

- 9485 0Z **Superimpose methods for uncooled infrared camera applied to the micro-scale thermal characterization of composite materials** [9485-35]
- 9485 11 **Characterization of nuclear graphite elastic properties using laser ultrasonic methods** [9485-37]
- 9485 12 **Thermal diffusivity estimation with quantitative pulsed phase thermography** [9485-46]

SESSION 7 MANUFACTURING AND PROCESSING INDUSTRIES

- 9485 13 **IR-based spot weld NDT in automotive applications** [9485-38]
- 9485 14 **Laser beam welding quality monitoring system based in high-speed (10 kHz) uncooled MWIR imaging sensors** [9485-39]
- 9485 15 **Comparison of the insulation property of an innovative material and a traditional one by infrared thermography** [9485-40]
- 9485 16 **Thermographic investigation of luminescent barium borate glasses for white-LED applications** [9485-41]
- 9485 17 **About infrared scanning of photovoltaic solar plant** [9485-42]

SESSION 8 NDT AND MATERIALS EVALUATION II

- 9485 19 **Three-dimensional non-destructive testing (NDT) in the infrared spectrum** [9485-44]
- 9485 1A **Thermographic inspection of external thermal insulation systems with mechanical fixing** [9485-45]
- 9485 1B **Analysis of the relative merits of the 3-5 μm and the 8-12 μm spectral bands using detected thermal contrast** [9485-47]

SESSION 9 DETECTION OF GAS AND LEAKS

- 9485 1C **Time-resolved multispectral imaging of combustion reaction** [9485-48]
- 9485 1D **Thermal imaging of microfluidic systems as a model for investigating energy efficiency** [9485-49]
- 9485 1F **Gas and flame detection and identification using uncooled MWIR imaging sensors** [9485-51]
- 9485 1G **Detection of seal contamination in heat-sealed food packaging based on active infrared thermography (Best Paper Award)** [9485-52]

SESSION 10 BIOLOGICAL/MEDICAL APPLICATIONS

- 9485 1H **Observation of temperature trace, induced by changing of temperature inside the human body, on the human body skin using commercially available IR camera [9485-53]**
- 9485 1I **Mass screening for infectious disease containment and pandemic outbreaks: misconceptions [9485-54]**
- 9485 1J **3D medical thermography device [9485-55]**

Authors

Numbers in the index correspond to the last two digits of the six-digit citation identifier (CID) article numbering system used in Proceedings of SPIE. The first four digits reflect the volume number. Base 36 numbering is employed for the last two digits and indicates the order of articles within the volume. Numbers start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B...0Z, followed by 10-1Z, 20-2Z, etc.

Conference Committees

Symposium Chair

Wolfgang Schade, Clausthal University of Technology (Germany)
and Fraunhofer Heinrich-Hertz Institute (Germany)

Symposium Co-Chair

Ming C. Wu, University of California, Berkeley (United States)

Conference Chair

Sheng-Jen (Tony) Hsieh, Texas A&M University (United States)

Conference Co-Chair

Joseph N. Zalameda, NASA Langley Research Center (United States)

Conference Program Committee

Andrea Acosta, Colbert Infrared Services (United States)

Nicolas Avdelidis, National Technical University of Athens (Greece)

Paolo Bison, Consiglio Nazionale delle Ricerche (Italy)

Jeff R. Brown, Embry-Riddle Aeronautical University (United States)

Douglas Burleigh, La Jolla Cove Consulting (United States)

Fred P. Colbert, Colbert Infrared Services (United States)

K. Elliott Cramer, NASA Langley Research Center (United States)

Ralph B. Dinwiddie, Oak Ridge National Laboratory (United States)

Herbert Kaplan, Honeyhill Technical Company (United States)

Timo T. Kauppinen, VTT Technical Research Center of Finland
(Finland)

Dennis H. LeMieux, Siemens Power Generation, Inc. (United States)

Monica Lopez Saenz, IRCAM GmbH (Germany)

Xavier P. V. Maldague, University Laval (Canada)

Gary L. Orlove, FLIR Systems, Inc. (United States)

Beata Oswald-Tranta, Montan University Leoben (Austria)

G. Raymond Peacock, Temperatures.com, Inc. (United States)

Piotr Pregowski, Pregowski Infrared Services (Poland)

Ralph A. Rotolante, Vicon Enterprises Inc. (United States)

Andres E. Rozlosnik, SI Termografia Infrarroja (Argentina)

Morteza Safai, The Boeing Company (United States)

Takahide Sakagami, Kobe University (Japan)

Steven M. Shepard, Thermal Wave Imaging, Inc. (United States)

Sami Siikanen, VTT Technical Research Center of Finland (Finland)

Gregory R. Stockton, Stockton Infrared Thermographic Services, Inc.
(United States)
Vladimir P. Vavilov, Tomsk Polytechnic University (Russian Federation)
Xiong Yu, Case Western Reserve University (United States)

Session Chairs

- 1 Aerospace Applications
Xavier Maldague, University Laval (Canada)
Ralph B. Dinwiddie, Oak Ridge National Laboratory (United States)
- 2 Building Materials and Infrastructure Applications I
Jeff R. Brown, Embry-Riddle Aeronautical University (United States)
Beata Oswald-Tranta, Montan University Leoben (Austria)
- 3 Building Materials and Infrastructure Applications II
Beata Oswald-Tranta, Montan University Leoben (Austria)
Jeff R. Brown, Embry-Riddle Aeronautical University (United States)
- 4 Detector and Sensory System Development
Joseph N. Zalameda, NASA Langley Research Center (United States)
Chien-Chon Chen, National United University (Taiwan)
- 5 NDT and Signal Processing
Steven M. Shepard, Thermal Wave Imaging, Inc. (United States)
Vladimir P. Vavilov, Tomsk Polytechnic University (Russian Federation)
- 6 NDT and Materials Evaluation I
Paolo Bison, Consiglio Nazionale delle Ricerche (Italy)
Junko Morikawa, Tokyo Institute of Technology (Japan)
- 7 Manufacturing and Processing Industries
Andres E. Rozlosnik, SI Termografía Infrarroja (Argentina)
Jian Chen, Oak Ridge National Laboratory (United States)
- 8 NDT and Materials Evaluation II
Takahide Sakagami, Kobe University (Japan)
Fred P. Colbert, Colbert Infrared Services, Inc. (United States)
- 9 Detection of Gas and Leaks
Vladimir P. Vavilov, Tomsk Polytechnic University (Russian Federation)
Michael Mauk, Drexel University (United States)

10 Biological/Medical Applications

Timo T. Kauppinen, VTT Technical Research Center of Finland
(Finland)

Ralph A. Rotolante, Vicon Infrared (United States)

Award Ceremony

Sheng-Jen Hsieh, Texas A&M University (United States)

Joseph N. Zalameda, NASA Langley Research Center (United States)

Introduction

The SPIE ThermoSense conference promotes the worldwide exchange of information about Infrared (IR) imaging technology research and applications. Relevant technology areas include: thermography, thermal infrared sensing, IR imaging, measuring instruments, and non-destructive testing methods.

ThermoSense XXXVII built upon previous successful conferences and included emerging topics in sessions on *NDT and Signal Processing*, *Biological and Medical Applications*, and *Infrared Detectors and System Development*. Following are brief summaries of each session.

- **Aerospace Applications:** This session focused on the characterization of materials and components applied in aircraft industry using hybrid thermography, ultrasound, and/or optical imaging techniques. Topics included: coating, composites evaluation, and panel fatigue growth assessment.
- **Building Materials and Infrastructure Applications:** These sessions focused on characterization of building materials and structures using thermography and analytic modeling methods such as Finite Element Analysis (FEA). Approaches utilized included lock-in, pulse-phase, and modulated frequency thermography. Types of defects investigated include flaw size, crack depth, bubbles, and pin-holes. Materials and structures studied included building concrete, storage racks, optical film, and acrylic glass.
- **Detector and Sensory System Development:** This session focused on fabrication of detectors including: infrared fiber, logarithmic InGaAs, x-ray scintillator, and indium-antimony nanowires. Topics included a state-of-the-art review of infrared fiber (invited paper), infrared system integration with detectors, and computational approach to enhancing thermal imaging.
- **NDT and Signal Processing:** This session consisted of four invited papers: *Pulsed thermal NDT in tables, figures, and formulas* [9485-26]; *Advances in thermographic signal reconstruction* [9485-27]; *Principal component analysis for thermal image analysis* [9485-28]; and *Review of thermographic signal reconstruction* [9485-29].
- **NDT and Materials Evaluation:** These sessions focused on materials evaluation utilizing hybrid non-destructive testing methods including laser ultrasound, thermal wave, C-scan, and microscope imaging. Materials of

interest included carbon fiber, photonic hetero-structure, mild steel, and nuclear graphite.

- **Manufacturing and Processing Industries:** This session focused on welding processes, including spot-welding and laser beam welding process characterization.
- **Detection of Gas and Leaks:** Detection of gas and leaks is an important problem for public safety and national security. The oil and gas and chemical industries have very strict guidelines on gas release. Topics presented included combustion reaction, water spray transmission, gas and flame detection, seal contamination of packaged food, and micro-fluid system activation. Both multispectral and mid-wave infrared imaging techniques were applied.
- **Biological/Medical Applications:** This new session focused on applications of thermography in areas related to biology and medicine. Topics included a presentation of a 3D medical thermography device, applications of infrared imaging for mass screening, and use of thermography to track human body temperature.

The conference drew participants from many countries including: Spain, Portugal, Austria, Italy, Germany, Greece, France, Belgium, Ireland, Russia, Columbia, Chile, Belgium, Finland, Australia, Kazakhstan, Taiwan, Japan, Canada, and United States. This year, we had 46 papers and 52 presentations.

We would like to thank the authors, vendors, session chairs, ThermoSense steering committee, and SPIE technical staff who made this conference a success. Finally, we would like to acknowledge the support of Jay James, Vice President for Sales at FLIR Systems, Inc., for donating a FLIR ONE personal thermal imager as the Best Paper prize.
