Volume 7264

Proceedings of SPIE, 1605-7422, v. 7264

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B … 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

vii *Conference Committee*
ix *In Memoriam: Robert F. Wagner (1938–2008)*

SESSION 1 DATABASE AND DATA MINING

7264 02 **Securely and flexibly sharing a biomedical data management system** [7264-01]
F. Wang, Emory Univ. (United States); P. Hussels, P. Liu, Siemens Corporate Research (United States)

7264 03 **The creation of a public database of precision phantoms to facilitate the evaluation and standardization of advanced visualization and quantification software** [7264-02]
J. J. Chen, Univ. of Maryland School of Medicine (United States); N. J. Saenz, VA Maryland Health Care System (United States); E. L. Siegel, Univ. of Maryland School of Medicine (United States) and VA Maryland Health Care System (United States)

7264 04 **Integration of CBIR in radiological routine in accordance with IHE** [7264-03]
P. Welter, T. M. Deserno, B. Fischer, RWTH Aachen Univ. (Germany); B. B. Wein, Private Practice for Radiology and Nuclear Medicine (Germany); B. Ott, R. W. Günther, RWTH Aachen Univ. (Germany)

7264 05 **Comparing the quality of accessing medical literature using content-based visual and textual information retrieval** [7264-04]
H. Müller, Univ. Hospitals and Univ. of Geneva (Switzerland) and Univ. of Applied Sciences Western Switzerland (Switzerland); J. Kalpathy-Cramer, Oregon Health & Science Univ. (United States); C. E. Kahn, Jr., Medical College of Wisconsin (United States); W. Hersh, Oregon Health & Science Univ. (United States)

7264 06 **A learned distance function for medical image similarity retrieval** [7264-05]
D. Tahmoush, Univ. of Maryland, College Park (United States) and U.S. Army Research Lab. (United States)

SESSION 2 SYSTEM INFRASTRUCTURE I: INTEGRATION AND STANDARDS

7264 08 **Clinical image processing engine** [7264-07]
W. Han, J. Yao, J. Chen, R. Summers, National Institutes of Health (United States)

7264 09 **Development of lung cancer CT screening operating support system** [7264-08]
R. Ishigaki, Kyoto College of Medical Science (Japan); K. Hanai, National Cancer Ctr. Hospital East (Japan); M. Suzuki, Research Ctr. for Cancer Prevention and Screening (Japan); Y. Kawata, N. Niki, The Univ. of Tokushima (Japan); K. Eguchi, Univ. of Teikyo (Japan); R. Kakinuma, N. Moriyama, Research Ctr. for Cancer Prevention and Screening (Japan)

7264 0C **Interoperability in healthcare: major challenges in the creation of the enterprise environment** [7264-11]
L. Lindsköld, Karolinska Institutet (Sweden) and HSA, Western Region (Sweden); M. Wintell, HSA, Western Region (Sweden); N. Lundberg, Karolinska Institutet (Sweden) and SLL (Sweden)

SESSION 3 IMAGING AND INFORMATICS-BASED THERAPEUTIC APPLICATIONS I

7264 0E **An image-intensive ePR for image-guided minimally invasive spine surgery applications including real-time intra-operative image acquisition, archival, and display** [7264-13]
J. R. Documet, A. Le, B. Liu, H. K. Huang, Univ. of Southern California (United States); J. Chiu, California Spine Institute (United States)

7264 0F **Interfacing proprietary hardware with the image-guided surgery toolkit (IGSTK): a case for the OpenIGTLink protocol** [7264-14]
S. Ordas, Z. Yaniv, P. Cheng, Imaging Science and Information Systems Ctr., Georgetown Univ. (United States); J. Tokuda, H. Liu, N. Hata, Brigham and Women's Hospital and Harvard Medical School (United States); K. Cleary, Imaging Science and Information Systems Ctr., Georgetown Univ. (United States)

SESSION 4 IMAGING AND INFORMATICS-BASED THERAPEUTIC APPLICATIONS II

7264 0G **System architecture and information model for integrated access to distributed biomedical information** [7264-15]
D. Kim, A. Alaoui, B. Levine, Imaging Science and Information Systems Ctr., Georgetown Univ. (United States); L. Leondaridis, P. Shields, S. Byers, Lombardi Comprehensive Cancer Ctr. at Georgetown Univ. (United States); K. Cleary, Imaging Science and Information Systems Ctr., Georgetown Univ. (United States)

7264 0H **An XML cytometry standard based on DICOM** [7264-16]
R. C. Leif, Newport Instruments (United States)

7264 0I **A robust real-time abnormal region detection framework from capsule endoscopy images** [7264-17]
Y. Cheng, Wuhan Univ. of Technology (China); X. Liu, H. Li, Applied Media Analysis, Inc. (United States)

7264 0J **The development of an MRI lesion quantifying system for multiple sclerosis patients undergoing treatment** [7264-18]
P. Moin, K. Ma, L. Amezcua, Keck School of Medicine, Univ. of Southern California (United States); A. Gertych, Cedars-Sinai Medical Ctr. (United States); B. Liu, Keck School of Medicine, Univ. of Southern California (United States)

7264 0K **Image-guided tumor motion modeling and tracking** [7264-19]
J. Zhang, Y. Wu, W. Liu, Univ. of Wisconsin, Milwaukee (United States); J. Christensen, A. Tai, A. X. Li, Medical College of Wisconsin (United States)

7264 0L **A prototype of image-guided outcome analysis for prostate proton therapy patients based on DICOM-RT ePR** [7264-20]
A. Le, J. Documet, A. Sullivan, B. Liu, Univ. of Southern California (United States)

SESSION 5 SYSTEM INFRASTRUCTURE II: INTEGRATION AND VISUALIZATION

7264 0M **Using CAVASS as the basis for imaging applications** [7264-21]
G. Grevera, St. Joseph's Univ. (United States) and Univ. of Pennsylvania (United States); J. Udupa, D. Odhner, Univ. of Pennsylvania (United States)

7264 0P **BrainIACS: a system for web-based medical image processing** [7264-24]
B. Kishore, P.-L. Bazin, D. L. Pham, The Johns Hopkins Univ. (United States)

7264 0Q **A remote real-time PACS-based platform for medical imaging telemedicine** [7264-25]
R. Maani, S. Camorlinga, R. Eskicioglu, Univ. of Manitoba (Canada) and TRLabs (Canada)

POSTER SESSION

7264 0T **Video compression and DICOM proxies for remote viewing of DICOM images** [7264-28]
E. Khorasani, V. Sheinin, B. Paulovicks, A. Jagmohan, IBM Thomas J. Watson Research Ctr. (United States)

7264 0U **Combining text retrieval and content-based image retrieval for searching a large-scale medical image database in an integrated RIS/PACS environment (Cum Laude Poster Award)** [7264-29]
Z. He, Y. Zhu, T. Ling, J. Zhang, Shanghai Institute of Technical Physics (China)

7264 0V **Individualized grid-enabled mammographic training system** [7264-30]
M. H. Yap, A. G. Gale, Loughborough Univ. (United Kingdom)

7264 0W **Design of an image-enabled electronic healthcare record system for regional collaborative healthcare applications (Honorable Mention Poster Award)** [7264-31]
K. Zhang, Y. Yang, Z. He, J. Sun, T. Ling, J. Zhang, Shanghai Institute of Technical Physics (China)

7264 0X **A multi-image approach to CADx of breast cancer with integration into PACS** [7264-32]
M. Elter, T. Wittenberg, Fraunhofer-Institute for Integrated Circuits (Germany); R. Schulz-Wendtland, Friedrich-Alexander-Univ. Erlangen-Nürnberg (Germany); T. M. Deserno, RWTH Aachen Univ. (Germany)

7264 0Y **Mapping DICOM to OpenDocument format** [7264-33]
C. Yu, Shanghai Jiao Tong Univ. (China); Z. Yao, Shanghai Institute of Biological Sciences (China) and Ruijin Hospital, Shanghai Jiao Tong Univ. (China)

7264 0Z **An automated distinction of DICOM images for lung cancer CAD system** [7264-34]
H. Suzuki, S. Saita, M. Kubo, Y. Kawata, N. Niki, H. Nishitani, The Univ. of Tokushima (Japan); H. Ohmatsu, National Cancer Ctr. Hospital East (Japan); K. Eguchi, Teikyo Univ. School of Medicine (Japan); M. Kaneko, National Cancer Ctr. Hospital (Japan); N. Moriyama, National Cancer Research Ctr. for Cancer Prevention and Screening (Japan)

7264 10 **Computer-aided diagnosis workstation and telemedicine network system for chest diagnosis based on multislice CT images** [7264-36]
H. Satoh, Tokyo Health Care Univ. (Japan); N. Niki, Univ. of Tokushima (Japan); K. Eguchi, Teikyo Univ. (Japan); H. Ohmatsu, National Cancer Ctr. Hospital East (Japan); R. Kakinuma, N. Moriyama, National Cancer Ctr. Hospital (Japan)

7264 11 **Development of a multicentric environment for medical imaging software and algorithm evaluation** [7264-37]
M. dos Santos, Univ. of Sao Paulo Medical School (Brazil) and Univ. Nove de Julho (Brazil); S. S. Furuie, Univ. of Sao Paulo Medical School (Brazil) and Univ. of Sao Paulo (Brazil)

7264 13 **A digital archiving system and distributed server-side processing of large datasets** [7264-39]
J. Jomier, S. R. Aylward, C. Marion, Kitware, Inc. (United States); J. Lee, M. Styner, Univ. of North Carolina at Chapel Hill (United States)

7264 14 **Image storage in radiation oncology: What did we learn from diagnostic radiology?** [7264-40]
K. Blodgett, M. Luick, A. Colonias, O. Gayou, S. Karlovits, E. D. Werts, Allegheny General Hospital (United States)

7264 15 **DTI data modeling for unlimited query support** [7264-41]
M.-R. Siadat, Oakland Univ. (United States) and Henry Ford Health System (United States); R. Hammad, Oakland Univ. (United States); A. Shetty, William Beaumont Hospital (United States); H. Soltanian-Zadeh, Henry Ford Health System (United States) and Univ. of Tehran (Iran, Islamic Republic of); I. K. Sethi, Oakland Univ. (United States); A. Eetemadi, K. V. Elisevich, Henry Ford Health System (United States)

7264 16 **Evaluation of a computer-aided detection algorithm for timely diagnosis of small acute intracranial hemorrhage on computed tomography in a critical care environment** [7264-42]
J. K. Lee, Univ. of Southern California (United States); T. Chan, The Hong Kong Polytechnic Univ. (Hong Kong, China); B. J. Liu, H. K. Huang, Univ. of Southern California (United States)

7264 17 **A virtualized infrastructure for molecular imaging research using a data grid model (Honorable Mention Poster Award)** [7264-43]
J. Lee, G. Dagliyan, B. Liu, Univ. of Southern California (United States)

7264 18 **An online real-time DICOM web-based computer-aided diagnosis system for bone age assessment of children in a PACS environment** [7264-44]
K. C. Ma, A. Zhang, P. Moin, M. Fleshman, Univ. of Southern California (United States); L. Vachon, LAC+USC Medical Ctr., Univ. of Southern California (United States); B. Liu, H. K. Huang, Univ. of Southern California (United States)

7264 19 **Data-centric protection in DICOM** [7264-45]
J. Künzi, Philips Research Eindhoven (Netherlands) and Ecole Polytechnique Fédérale de Lausanne (Switzerland); M. Petkovic, P. Koster, Philips Research Eindhoven (Netherlands)

Program Committee

Adil Alaoui, Georgetown University Medical Center (United States)
Katherine P. Andriole, Harvard Medical School (United States)
William W. Boonn, University of Pennsylvania (United States)
Kevin R. Cleary, Georgetown University Medical Center (United States)
Janice C. Honeyman-Buck, University of Florida (United States)
Steven C. Horii, University of Pennsylvania (United States)
Heinz U. Lemke, Technische Universität Berlin (Germany)
John B. Strauss, FUJIFILM Medical Systems USA, Inc. (United States)
Wyatt Tellis, University of California, San Francisco (United States)

Session Chairs

1 Database and Data Mining
Wyatt Tellis, University of California, San Francisco (United States)

2 System Infrastructure I: Integration and Standards
Janice C. Honeyman-Buck, University of Florida (United States)

3 Imaging and Informatics-based Therapeutic Applications I
Heinz U. Lemke, Technische Universität Berlin (Germany)

4 Imaging and Informatics-based Therapeutic Applications II
Adil Alaoui, Georgetown University Medical Center (United States)

5 System Infrastructure II: Integration and Visualization
William W. Boonn, University of Pennsylvania Medical Center (United States)

6 Imaging and Informatics: Expert Panel Talks
Khan M. Siddiqui, VA Maryland Health Care System (United States)
Brent J. Liu, University of Southern California (United States)

In Memoriam

Robert F. Wagner

1938–2008

A founding scientist and prolific contributor to modern medical imaging science and SPIE

Robert F. "Bob" Wagner was a tremendous innovator in the field of medical imaging and image assessment methodologies. He was a key figure in the creation of the SPIE Medical Imaging symposium. An SPIE Fellow since 1988, Bob was active on the program committee of the Physics of Medical Imaging conference at the Medical Imaging symposium, and author of numerous technical papers published by SPIE.

"The medical imaging community has lost one of its founding fathers and most highly regarded members," said Kyle Myers, director of the Division of Imaging and Applied Mathematics at the Center for Devices and Radiological Health (CDRH), U.S. Food and Drug Administration (FDA). "Bob's career was dedicated to the development of consensus measurement methods for the assessment of medical imaging systems, quantitative medical imaging and tissue characterization, and computer-aided diagnosis. He earned an international reputation in these areas and applied his expertise to a wide range of regulatory issues central to the FDA's mission. He enlightened the scientific community within the agency as well as the international scientific community through the many invited presentations and tutorials he gave in and outside of the FDA, his numerous publications, his many professional society activities, and his assistance in regulatory decision making."

At this 2009 Medical Imaging symposium, a joint keynote session hosted by the CAD and Image Perception conferences honored Bob's many contributions from the early 1970s to the present through a series of presentations by some of his closest collaborators.

David Brown (CDRH/FDA) recalled Bob's early years in the field, relating that after graduate and post-graduate work on the physics of nuclear interactions with radiation, Bob was hired by the Bureau of Radiological Health [a precursor to CDRH] to assess the dose reduction potential of radiographic intensifying screens made with phosphors developed in the color TV industry. Within three months he published a review of the relevant imaging literature from the medical, defense, consumer, and scientific communities, together with a charter for a laboratory program. Soon after, Bob introduced digital noise analysis to radiography, and showed that the new technology offered a 1.6- to 2.5-fold exposure reduction without compromising imaging performance. He then launched a program of inter-laboratory comparison of measurements on radiographic film samples that were circulated among fifteen commercial, government, and academic laboratories worldwide. In the process he became the prime mover for work toward consensus methodology for quantitative imaging performance measurements.

Mike Insana (Univ. of Illinois at Urbana-Champaign) shared memories of his years as Bob's post-doctoral student, working with Bob on the statistical characterization of ultrasound images. He described Bob as an exemplary mentor who shared his passion and joy for science.

Myers agreed, "Bob's greatest legacy may be the many young scientists he nurtured, who either worked directly under his tutelage at the FDA or otherwise benefitted from his unfailing patience and unselfish ease of availability."

Harry Barrett (Univ. of Arizona) began his presentation by relating noise-equivalent quanta (NEQ)—a concept central to Bob's unified approach to objective image performance assessment—to historical information-theoretic methods for evaluation of imaging systems. Barrett went on to describe the many ways in which NEQ was extended to address problems beyond the simple signal-known-exactly, background-known-exactly (SEK/BKE) task.

Ken Hanson (Los Alamos National Lab.) described his years of collaboration with Bob. He said they worked together, first in the area of noise characterization of radiographic and CT images and later on the evaluation of images confounded by artifacts. In this latter work, Bob and Ken pioneered the application of a decision theoretic approach to the assessment of image reconstruction algorithms, demonstrating that the common mean-square-error metric did not predict visual task performance as measured by detectability.

Bob's contemporary work, as described by Myers, "involved the consideration of the random effects associated with multiple readers of medical images and the logical extension of this work to the problem of the evaluation of multiple competing classifiers in statistical pattern recognition. Bob tackled problems of increasing complexity over the course of his career, relying throughout on the application of a unified, decision theoretic framework. In the process he brought about consensus on the importance of a task-based approach to the objective assessment of imaging systems."

During more than forty years of professional life, Bob Wagner made numerous contributions to the field of medical imaging that significantly impacted academia, industry, and the FDA. His brilliant mind, incredible intuition, passion for science, sense of humor, charm, and warm friendship will be greatly missed.
